Summary

AI/ML Engineer with a foundation in Data Science and hands-on experience in building machine learning models, analyzing data, and developing Python-based applications. Focusing on NLP and Gen-AI, including RAG & LLM-based applications and semantic search to build practical and data-driven solutions.

Education

Vellore Institute of Technology, Bhopal CGPA-8.82/10
B.Tech in Computer Science, AI & ML *Sep 2023 – May 2027*

Technical Skills

Programming Languages: Python, C++, SQL
AI/ML & Data Science: Scikit-learn, Supervised & Unsupervised Learning, Feature Engineering, Model Evaluation, Pandas, NumPy, EDA, Microsoft Power BI
NLP & Deep Learning: Text Preprocessing, ANN, RNN, LSTM, NLP ,Transformers
Gen AI & LLMs: Hugging Face, LLMs, RAG, ChromaDB (Vector DB) ,Embeddings, Vector Search, LangChain, LCEL, Prompt Engineering
Databases: FastAPI, REST APIs, PostgreSQL, MySQL
Coursework: Data Structures & Algorithms(DSA), DBMS, OS, OOps

Projects

Multi-Agent AI Trip Planner | | | *Python, Generative AI, TaskflowAI, OpenAI API, Streamlit*

- Automate travel planning by combining destination research, local events, weather updates, and flight search in one application.
- Integrated 3 specialized AI agents and 5 travel-planning tasks using OpenAI, Serper API, Wikipedia tools, Weather API, and Amadeus API.
- Created reports that bring together all the details, about a place to visit what events are happening what the weather will be and the top three flight choices. The system is built in a way that makes it easy to use with Docker for deployment.

E-Commerce Customer Retention Analytics Platform | | | *SQL, Python, Pandas, Streamlit*

- Segmented **4.3K+ customers into RFM cohorts** using Python and Pandas, **reducing data processing latency** by structuring indexed SQL queries.
- Isolated **214 high-risk users** by evaluating **4 ML models to accurately predict** customer churn based on purchase behavior.
- Tracked **30/60/90-day retention trends** by building an AI-driven dashboard using Streamlit, Julius AI, and SQL databases.

SmartCart AI - Multilingual Voice Shopping Assistant | | | *FastAPI, Python, NLP*

- Engineered a voice assistant supporting **3 languages** (English, Hindi, Hinglish) by developing a lightweight NLP parser to process grocery commands.
- Increased item discovery by integrating **market-basket recommendations** to rank frequently co-purchased items and suggest alternative product substitutes.
- Enabled **real-time shopping tracking** by deploying the data pipeline as a secure web service to manage multi-user sessions.

Extracurricular Activities

Beyond Level-O-Hackathon | Team Lead & Presenter | Certificate Aug 2024

- Was among the **top 5 teams** by collaborating in a 4-member multi-skilled team, communicating technical discussions in fluent English to pitch the final prototype to judges.

Flowzint Hackathon | *Developer & Participant* | | | Certificate Aug 2026

- Built and end-to-end webapp for a business assistant using AI to recover overdue payments, analyzing customer behavior to automate collection workflows and generate professional reminder emails.
