SUMMARY

Aspiring Data Scientist with hands-on experience in Python, SQL, Machine Learning, and Data Analysis. Skilled in building predictive models, performing exploratory data analysis (EDA), feature engineering, and developing end-to-end data-driven solutions using real-world datasets. Passionate about solving complex business problems through statistical modeling and artificial intelligence.

TECHNICAL SKILLS

Programming Languages: Python, SQL, C++

Data Science: Pandas, NumPy, Scikit-learn, TensorFlow

Data Visualization: Matplotlib, Seaborn, Plotly

Databases: PostgreSQL, MySQL

Machine Learning: Supervised Learning, Unsupervised Learning, Feature Engineering, Model Evaluation, Classification, Regression, Clustering

Coursework: Data Structures & Algorithms, DBMS, OOP, Statistics

PROJECTS

Retail Sales Intelligence System

Python, Pandas, NumPy, Scikit-learn, Streamlit, Power BI

- Developed an end-to-end machine learning pipeline to predict retail order profitability using historical sales transaction data.
- Performed data preprocessing, feature engineering, and exploratory data analysis (EDA) on 9,000+ retail records to uncover revenue, discount, and purchasing patterns.
- Trained and evaluated multiple classification models, achieving **94% accuracy** using Random Forest for profit-loss prediction.
- Built an interactive Streamlit application and Power BI dashboard to visualize model predictions and key business insights.

Natural Language Processing GUI Application

Python, Tkinter, NLTK, Transformers, JSON

- Developed a desktop-based NLP application with secure user authentication using Tkinter and JSON-based data storage.
- Integrated Sentiment Analysis, Named Entity Recognition (NER), and Emotion Detection into a unified interface for end-to-end text analysis.
- Implemented NLTK VADER and Transformer-based models to generate real-time sentiment, entity recognition, and emotion predictions from user input.
- Designed an intuitive GUI to provide interactive natural language processing capabilities with real-time inference.

FlowZint BusinessOS AI-Revenue Recovery Copilot

React, Node.js, Google Gemini API, REST APIs

- Developed an AI-powered Revenue Recovery Copilot to automate invoice follow-ups, improve payment tracking, and prioritize high-risk customer accounts.
- Led the implementation of AI-driven features using the Google Gemini API while collaborating with teammates to ensure successful project delivery.
- Built an interactive business dashboard for invoice management, revenue insights, and customer risk analysis using modern web technologies.
- Integrated REST APIs to enable seamless communication between frontend components, backend services, and AI-powered workflows.

EDUCATION

Vellore Institute of Technology, Bhopal

B.Tech in Computer Science, AI & ML

CGPA-8.81/10

Sep 2023 – May 2027
