SUMMARY

Data Scientist with a strong foundation in data analysis, statistical modeling, and feature engineering. Skilled at using modern **AI tools to optimize code efficiency** and design intelligent data dashboards. Committed to continuous technical growth, blending standard data science workflows with emerging AI technologies to solve complex problems.

EDUCATION

Vellore Institute of Technology, Bhopal
B.Tech in Computer Science, AI & ML

CGPA-8.82/10
Sep 2023 – May 2027

TECHNICAL SKILLS

Programming Languages: Python, SQL, C++

Data Science: Pandas, NumPy, Scikit-learn

Data Visualization: Matplotlib, Seaborn, Plotly, Microsoft Power BI, Julius AI Tool

Databases: PostgreSQL, MySQL

Machine Learning: Supervised Learning, Unsupervised Learning, Feature Engineering, Model Evaluation

Coursework: Data Structures & Algorithms, DBMS

PROJECTS

E-Commerce Customer Retention Analytics Platform |   | *SQL, Python, Pandas, Streamlit, Julius AI*

- Optimized customer retention targeting by segmenting **4.3K+ customers into actionable RFM cohorts** using Python and Pandas.
- Predicted customer churn** by evaluating **4 ML models**, deploying the optimal architecture to isolate 214 high-risk users based on purchase behavior.
- Built an **AI-driven dashboard using Streamlit and Julius AI** to analyze **30/60/90-day** customer retention trends from **SQL databases**.
- Optimized data retrieval pipeline by structuring indexed SQL queries, **reducing analytical processing latency** for large cohort datasets.

SmartCart AI - Multilingual Voice Shopping Assistant |   | *FastAPI, Python, NLP*

- Engineered a multilingual voice-based** shopping assistant **supporting English, Hindi, and Hinglish commands** for adding, updating, and removing grocery items.
- Developed a lightweight NLP parser to normalize product names, quantities, units, and user intents from natural-language shopping commands.
- Implemented market-basket recommendations** to rank frequently co-purchased items and integrated substitute suggestions for alternative grocery products.
- Deployed the data pipeline** as a web service, enabling real-time shopping-list tracking and secure data storage across user sessions.

Retail Sales Intelligence System |   | *Python, Pandas, NumPy, Scikit-learn, Streamlit, Power BI*

- Analyzed 9K+ retail transactions** to uncover revenue and purchasing patterns using Python, Pandas, and NumPy, and operationalized insights through **Streamlit and Power BI**.
- Achieved 94% classification accuracy** for retail profit-loss prediction using a Random Forest model with engineered transactional features.
- Mitigated model overfitting by conducting rigorous k-fold cross-validation and feature scaling during the model training phase.
- Empowered business stakeholders by designing interactive profit-margin simulators within Streamlit to test hypothetical discount scenarios.
